Arch. Katja Bremkamp

The asymmetrical and rather unfamiliar shape of this cutlery range was influenced by the way we handle certain situations relating to the table routine. I was looking at the movements of the hands when dishing food out of bowls, when serving onto a plate and how this movement alters when food is conveyed into the mouth. Each piece reflects these movements individually, referring to their purposes and their "actions", as some pieces are more asymmetrical than others. The overall asymmetrical shape of this range therefore supports the comfortable handling of cutlery and also acts as guide to the person who is using it.

La forma asimmetrica e non convenzionale di questo modello è stata influenzata dall'osservazione dei comportamenti e delle routine legate al consumo del cibo a tavola. Ho guardato i movimenti delle mani durante la disposizione del cibo sul piatto, la raccolta del boccone e l'accompagnamento alla bocca. Ogni pezzo riflette individualmente questi movimenti, riferendosi al loro scopo e alle loro azioni; questo spiega il motivo per cui alcuni pezzi sono più asimmetrici di altri. Oltretutto, l'asimmetria di questa linea avvantaggia la maneggevolezza della posata in modo da guidare la persona che la usa.

Ci sono Chef nel mondo che emozionano attraverso il gusto. A differenza del carbone, le pietre laviche rilasciano il calore molto lentamente e possono mantenere il cibo in cottura, senza cuocerlo eccessivamente

Unlike charcoal, lava stones release the heat very slowly and can cook food without over-cooking.

Ambiente Environment

Da molti anni MEPRA ha a cuore la salute dell'ambiente e dei lavoratori e l'uso sostenibile delle risorse ambientali, spesso anticipando di decenni le normative europee sul lavoro e sull'ambiente, investendo e puntando su impianti sempre più sicuri, alla ricerca di materiali e prodotti ausiliari sempre meno pericolosi, a garanzia della sicurezza e della salute del personale addetto e della comunità all'interno della quale l'azienda opera. Nei primi anni '80 del secolo scorso, gli impianti di lavaggio dei manufatti intermedi e finiti che utilizzavano solventi clorurati, vengono interamente rimpiazzati da impianti automatici che utilizzano sgrassanti a base acquosa (tunnel di lavaggio a tappeto). Nello stesso periodo gli impianti di pulitura e lucidatura della posateria manuali, vengono sostituiti da macchinari automatici a ciclo continuo, dotati di impianti di aspirazione e di abbattimento polveri. Negli anni '90, MEPRA, sempre più attenta alle tematiche ecologiche, trasforma i suoi impianti di lavaggio con soluzioni sgrassanti a base acquosa, che utilizzano e scaricano l'acqua per il lavaggio dei pezzi, in impianti che riciclano interamente le acque di lavaggio, filtrandole e re-immettendole nel ciclo senza alcuno scarico negli impianti fognari. Nel 1999 MEPRA con spirito innovativo si proietta verso il futuro, dotandosi di un sistema energetico altamente tecnologico; viene infatti installato un impianto di COGENERAZIONE. Viene utilizzato il metano come combustibile pulito, si genera elettricità per l'uso interno, si recupera il calore sprigionato dalla produzione elettrica, per il riscaldamento dei cicli produttivi che assorbono calore ed inoltre per il riscaldamento ambientale durante l'inverno, in modo da diminuire drasticamente l'inquinamento atmosferico prodotto dai gas serra. MEPRA rifiuta categoricamente ogni forma di sfruttamento del lavoro minorile ed investe ogni giorno per offrire alle nuove generazioni un futuro migliore, collaborando con le università e le scuole secondarie della comunità locale per formare i manager e i tecnici del futuro e per sostenere il mantenimento e l'accrescimento della cultura del lavoro, dei valori e delle competenze professionali che rappresentano una delle caratteristiche peculiari del distretto industriale all'interno del quale l'azienda opera.

Since many years MEPRA cares about the health of workers and the environment and sustainable use of environmental resources, often decades ahead of European regulations on labor and environment. Mepra invests and focus on safer and safer equipments, looking for materials and auxiliary products less and less dangerous, to guarantee safety and health of the workers as well as the community within which it operates. In the early 80s of last century, the washing equipment, previously based on chlorinated solvents, are entirely replaced by automatic systems that use water-based washing tunnels. In the same period the hand operated cutlery cleaning and polishing machineries, are replaced by continuous loop automatic machines, equipped with suction pumps and dust abatement equipment. In the '90s, MEPRA, more and more careful about the environment, converts washing systems previously using water-based degreasing solutions that were filtered and discharged into the sewers, into equipments that recycle the wastewaters by filtering and re-pumping them in the washing cycle without any waste in sewage plants. MEPRA in 1999 with an innovative spirit is projected into the future, adopting a high-tech energy system, a cogeneration system is in fact installed. It uses natural gas as clean fuel, electricity can be generated for internal use, it re-uses the heat generated from electricity production in production cycles and also for heating the plant during the winter, in order to drastically reduce carbon emissions. MEPRA categorically rejects all forms of child labor and invest every day to offer the new generations a better future, working with universities and secondary schools in the local community to train managers and technicians of the future and to carry-on work culture, values and skills that represent one of the characteristics of the industrial district in which the company operates.

Abbiamo a cuore l'ambiente e il futuro del genere umano
Sin dal 1947 Mepra si trova ai piedi delle Prealpi Italiane. Siamo cresciuti e viviamo ogni giorno in simbiosi con le nostre montagne, abbiamo a cuore i nostri alberi, le nostre acque e l'aria che noi e i nostri figli respiriamo.

Nella lotta al cambiamento climatico ogni voce conta, anche la più piccola, in ogni angolo del mondo, e sentiamo la responsabilità di fare la nostra parte per assicurare un futuro migliore al pianeta.

Riduzione delle Emissioni di CO2

Con l'obiettivo di ridurre drasticamente le emissioni di CO2 Mepra si è impegnata ad installare un impianto fotovoltaico per produrre oltre 160.000 KWh all'anno e ridurre di conseguenza le emissioni di CO2 di 84.000 Kg. Il fabbisogno energetico residuo, nei mesi invernali, viene prodotto, per la maggior parte, con un sistema di cogenerazione. Questo impianto produce elettricità e, allo stesso tempo, il calore necessario per il riscaldamento dei locali aziendali, con un significativo risparmio energetico.

Riciclo

La maggior parte dell'acciaio utilizzato da Mepra nel processo produttivo proviene da fonti riciclate

Tutto lo scarto di produzione viene riciclato per produrre nuova materia prima

Gestione e recupero dei rifiuti

Mepra è da anni impegnata nella raccolta differenziata, non solo degli imballaggi, ma di tutti i rifiuti prodotti in azienda.

Conservazione delle risorse idriche

Dai primi anni '90 Mepra utilizza, all'interno del suo ciclo produttivo, un sistema di recupero dell'acqua di lavaggio e dei detergenti che vengono filtrati e re-immessi nel ciclo idrico senza alcuno scarico negli impianti fognari.

Utilizzo di sostanze non inquinanti:

Già dai primi anni '80, gli impianti di lavaggio dei manufatti intermedi e finiti che utilizzavano solventi clorurati, sono stati interamente rimpiazzati da impianti automatici che utilizzano sgrassanti a base acquosa (tunnel di lavaggio a tappeto).

Depurazione dell'aria

Nello stesso periodo gli impianti manuali di pulitura e lucidatura della posateria, sono stati sostituiti da macchinari automatici a ciclo continuo, dotati di impianti di aspirazione e di abbattimento polveri.

We have the future of the environment and the human species at heart

Since 1947 Mepra has been located at the foothill of the Italian pre Alps. We grew with and live in symbiosis with our mountains, day in day out, we care for our trees, our waters and the air we and our children breathe. In the fight against climate change every voice counts, even the faintest one, in every corner of the earth, and we feel the responsibility to play our part to ensure a better future for our planet.

Reduction of CO2 emissions

In the quest of drastically reducing CO2 emissions, Mepra has been working hard on the installation of a photovoltaic plant to produce more than 160.000 KWh per year, thus reducing CO2 emissions by 84.000 Kg.

The residual energy requirement in the winter months is produced for the most part by a cogeneration system that at the same time produces electricity and the necessary heat to heat up the offices, resulting in a significant energy saving.

Recycling

The majority of the steel used by Mepra in the production process comes from recycled sources. All the production waste is recycled to produce new raw material.

Waste management and recovery

For years Mepra has been practicing differentiated waste collection, not only with packaging, but all waste produced by the company.

Conservation of water resources

Since the early '90s Mepra uses a system that recovers the washing water and detergents used in production, by filtering them and re-introducing them in the water cycle without any discharge into the sewage system.

Use of non-polluting substances

Since the beginning of the 80's the washing machinery of the intermediate or finished products that used chlorinated solvents have entirely been replaced by automated machinery that use water-based degreasers.

Air purification

Always in the 80's the cleaning and polishing machinery used for cutlery have been replaced by automated loop machines equipped with dust suction and elimination systems.
